Special Instructions / Comments – Please enter below:

The final mask size will typically be 1" larger than the image size. For instance, a 4" wafer will require a 5" mask. If you build your own border into the design, then we will not add to it.

The Field (background) is the area outside the extreme outermost entities in the design, and typically extends out to the edge of the film.

Right Reading Down (RRD) means that we will mirror the data before we plot it, so that the image will have the same orientation when printed onto the substrate as it is in the original design.
